

An integrated private and instrument curriculum

Newcastle, WA -ASA's newest addition to The Pilot's Manual Series,

Access to Flight, provides an innovative curriculum that meets the challenges of training in the 21st century. This comprehensive ground school textbook combines the Private Pilot and Instrument Rating curriculum into a single flight training program.

The Pilot's Manual:

Today's increasingly complex flight environment and Technically Advanced Aircraft (TAA) demand a level of understanding and functional proficiency as never before. Fuel costs and time constraints continue to rise, mandating an efficient curriculum for pilots in training. The integration of Private and Instrument curriculums in this breakthrough course is simply the most efficient and effective way to prepare for safe flight within this dynamic environment and during these demanding economic times. In addition to preparing pilots for the cockpit, chapter review questions will help prepare students for the FAA Private and Instrument Knowledge Exams.

The Pilot's Manual: Access to Flight textbook can also be used for Private and Instrument students participating in a more traditional, non-integrated training approach. Whichever method is used, pilots will learn to intrinsically manage the combined skills of aircraft control, task management, systems management, and operating in busy airspace.

Whether flying for pleasure, business, or a career in aviation, the Private Pilot certificate with the Instrument Rating is the ticket into the full spectrum of the airspace system - it is the key to maximizing the utility of a general aviation aircraft. Foreword by Cirrus Design co-founders Alan and Dale Klapmeier. Includes more than 800 full-color illustrations.

Hardcover, 8-3/8"

x 10-7/8", 816 pages.

This book is part of The Pilot's Manual Series, the series used by leading universities as their standard classroom textbooks. Also in The Pilot's Manual Series: Ground School, Flight School, Instrument Flying.
